

CPM machine is ideally suited for jewellery and other intricate components. The machine features a variable frequency drive for speed control and has replaceable polyurethane liners inside the barrels. This machine is compact and uses the latest technology in the transmission of rotary motion. The equipment can be supplied with stainless steel barrels for specific processes.

## Specifications

CPM - AND 20	
Width	800 mm(31.5 inch)
Depth	800 mm(31.5 inch)
Height	1100 mm(43.3 inch)
Motor	1 HP
RPM	150 with variable frequency drive.

## Applications

- Deburring
- Polishing
- Descaling
- Super finishing

## Features

- Competitive running cost.
- Direct drive system ensures trouble free performance as compared to conventional mechanism.
- Polyurethane liners/inserts can be easily replaced as they are removable type.
- Interlock facility is provided for door opening and automatic pressure release system to ensure operator safety.
- Stainless steel vibratory separator is provided for parts separation.
- Very simple and easy method for belt tightening.
- User friendly method of pressure releasing.
